

LOGifyer

Collect your AI Real - World Dataset with Ease!

Why LOGifyer?

The demand for high-quality, real-world datasets is growing rapidly, especially in areas like ADAS, autonomous driving and off-highway applications.

LOGifyer is designed to simplify and optimize data collection, ensuring reliable, high-speed logging in any environment. Whether in a moving vehicle or a mobile test setup, LOGifyer delivers seamless, secure and efficient data recording.

With its robust design, scalable storage and cutting-edge connectivity, LOGifyer is the all-in-one solution for collecting, managing and processing critical AI development data.

All you Need – Three Devices in One!

Mobile NAS

Scalable, high-performance storage for large AI datasets in mobile and automotive applications.

Logging Solution

High-speed, reliable data acquisition with multi-format support and real-time processing.

Application Ready

Kickstart real-world data collection with LOGifyer: Run your app in a VM on the LOGifyer device and connect seamlessly via standard interfaces & protocols.

Key Features

+ The right device class for each use case

Multiple classes of devices are available to ensure the right fit for different data logging needs. Logging bandwidths range from 13 Gbit/s to 160 Gbit/s, with storage sizes from 15 to 2x120 TByte. Devices support 4 to 64 CPUs, 6 to approximately 60 logging interfaces, and GPU performance from 30 to 300 watts.

+ Developed for harsh environments in mobile setups

Built for reliability in extreme temperatures, vibrations and mobile conditions. A key feature is broad interface support, both central and decentralized, including LIN, CAN, Flexray, Automotive Ethernet, CSI2onFPDLink, CSI2onGMSL, ASA-ML and more.

+ Holistic storage ecosystem

Smooth integration with local and cloud storage for seamless data management. Encryption, ingest and docking stations, as well as transport cases and tracking solutions, are available depending on the use case.

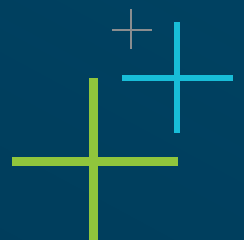

+ Connected

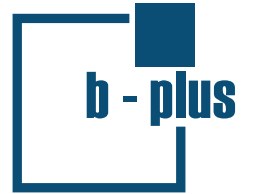

High-speed interfaces provide real-time access and secure remote connectivity, supporting technologies such as SMB share, DDS, ASAM CMP, TSN functionality, and b-plus Remote Device Management.

Stay tuned - more LOGifyer products are coming!
